Type: ROUTINE INSPECTION
Date: Apr-19-2011

2.50 (a) (2)

TIME AND METHOD OF IDENTIFICATION.

(a) A class "A" dealer (breeder) shall identify all live dogs and cats on the premises as follows:
(2) Live puppies or kittens, less than 16 weeks of age, shall be identified by:
(i) An official tag as described in Sec. 2.51;
(ii) A distinctive and legible tattoo marking approved by the Administrator; or
(iii) A plastic-type collar acceptable to the Administrator which has legibly placed thereon the information required for an official tag pursuant to Sec. 2.51. or microchip

****The puppies in the puppy house did not have any type of identification. Proper identification is necessary to identify animals for medication and record-keeping purposes. The licensee must provide proper identification as described above. Puppies from the same litter that are no longer with the mother but are housed in the same enclosure can be identified with a cage card until they are 16 weeks old. This affects 15 puppies.
To be corrected by April 21, 2011.

3.1 (f)

HOUSING FACILITIES, GENERAL.

(f) Drainage and waste disposal. Housing facility operators must provide for regular and frequent collection, removal, and disposal of animal and food wastes, bedding, debris, garbage, water, other fluids and wastes, and dead animals, in a manner that minimizes contamination and disease risks. Housing facilities must be equipped with disposal facilities and drainage systems that are constructed and operated so that animal waste and water are rapidly eliminated and animals stay dry. Disposal and drainage systems must minimize vermin and pest infestation, insects, odors, and disease hazards. All drains must be properly constructed, installed, and maintained. If closed drainage systems are used, they must be equipped with traps and prevent the backflow of gases and the backup of sewage onto the floor. If the facility uses sump or settlement ponds, or other similar systems for drainage and animal waste disposal, the system must be located far enough away from the animal area of the housing facility to prevent odors, diseases, pests, and vermin nfestation. Standing puddles of water in animal enclosures must be drained or mopped up so that the animals stay dry. Trash containers in housing facilities and in food storage and food preparation areas must be leakproof and must have tightly fitted lids on them at all times.

Inspection Report

****The trash can in the puppy house did not have a lid. Trash receptacles need to have tight-fitting lids to prevent the attraction of insects and vermin. The licensee must acquire a trash can with a tight-fitting lid. This affected 15 puppies.
To be corrected by April 29, 2011.

The inspection and the exit briefing were conducted by Konnie Plumlee-VMO and the licensee.

3.4 (c)

OUTDOOR HOUSING FACILITIES.

Sec. 3.4 Outdoor housing facilities. (c) Construction. Surfaces of outdoor housing facilities--including houses, dens, etc.--that cannot be readily cleaned and sanitized, must be replaced when worn or soiled.

-The licensee has several sections of outdoor housing. In the outdoor housing in "the complex" area - the large dogs have chewed the fronts of the dogloo plastic dog houses. These rough surfaces cannot be adequately cleaned and disinfected due to the roughened surfaces. The licensee must repair or replace the dog houses that have these chewed fronts so that all surfaces in the outdoor pens can be easily cleaned and sanitized.
This affected at least 20 adult dogs in this area
To be corrected by December 3, 2009

This inspection was conducted by Jan Feldman - ACI and the licensee.

Time of inspection: 9:45 am

2.40 (b) (2)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

***(b) Each dealer or exhibitor shall establish and maintain programs of adequate veterinary care that include:

(2) The use of appropriate methods to prevent, control, diagnose, and treat diseases and injuries***

In one of the outdoor enclosures in the lower kennel South and East of the house, there was an adult female Cocker whose haircoat was moderately/severely matted. All mats must be removed in a timely manner not only to prevent trauma to the underlying skin but also for the comfort and well-being of the dogs.

TO BE CORRECTED BY 9-24-07

3.1 (b)

HOUSING FACILITIES, GENERAL.

(b) Condition and site. Housing facilities and areas used for storing animal food or bedding must be free of any accumulation of trash, waste material, junk, weeds, and other discarded materials.

Immediately adjacent to the outdoor enclosures housing adult Rhodesian Ridgebacks at the West end of the facility, there was a severe overgrowth of weeds. The weeds were at least five feet tall in areas. The areas in question were unoccupied dog enclosures which were located between enclosures housing animals. All areas immediately adjacent to the animal areas must be free of weeds to discourage the infestation of the area by pests and other vermin and their subsequent contact with the dogs.

TO BE CORRECTED BY 9-30-07

3.1 (f)

HOUSING FACILITIES, GENERAL.

***(f) Drainage and waste disposal. Housing facility operators must provide for regular and frequent collection,

removal, and disposal of animal and food wastes, bedding, debris, garbage, water, other fluids and wastes, and dead animals, in a manner that minimizes contamination and disease risks. Housing facilities must be equipped with disposal facilities and drainage systems that are constructed and operated so that animal waste and water are rapidly eliminated and animals stay dry. Disposal and drainage systems must minimize vermin and pest infestation, insects, odors, and disease hazards. All drains must be properly constructed, installed, and maintained***

Just inside the main gate to the lower kennel East and South of the house, the drainage pipe removing waste from the enclosures was leaking out from the junction onto the ground. There was a puddle of stagnant, malodorous water immediately surrounding the pipe in the area which was attracting a few flies. All drainage systems must be maintained so prevent vermin and pest infestation, insects, odors, and pests.

TO BE CORRECTED BY 10-7-07

3.4 (c)

OUTDOOR HOUSING FACILITIES.

(c) Construction. Building surfaces in contact with animals in outdoor housing facilities must be impervious to moisture. All surfaces must be maintained on a regular basis. Surfaces of outdoor housing facilities--including houses, dens, etc.--that cannot be readily cleaned and sanitized, must be replaced when worn or soiled

All along the outdoor portions of the North side of the upper whelping South and West of the house, the wood paneling that was forming the South wall of the enclosure was covered with a moderate/severe growth of algae. This growth extended from the concrete flooring to a level approximately two feet up off the ground. All surfaces in contact with the dogs must be impervious to moisture so that they can be properly cleaned and sanitized.
